

The FAA Safety Team presents:

A Chilling Subject

Whether you're planning a local flight or extended cross country flight, flying in winter conditions requires some unique preparations. To safely conduct Winter Operations when icing conditions are present either in the air or on the airport surfaces requires some advanced planning by the Pilot In Command. Aircraft icing during flight can be catastrophic! It disrupts the flow of air over the aircraft diminishing the wing's maximum lift and the propeller's thrust. Don't go out unprepared this winter, attend this informative briefing on Winter Operations in order to be a better prepared and safer pilot this winter. Please register on-line for this exciting event by clicking on the link below!

Directions: From Route 309 take Ridgeview Drive West, go straight ahead at the 3 way stop intersection and you will see the Computer Aid, Inc. brick office building. The seminar will be held in the Doral Conference Room on the first floor.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASafety Team) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
